

Primea

Ring

Ultra Automatic Espresso Machine

Taste the **Saeco** Advantage

- One-Touch Technology:** The Primea Ring will automatically grind the right amount of coffee, tamp, brew and dispense the used grounds into an internal dregdrawer, all at the touch of a button.
- Saeco Easy Clean System:** The heart of the Primea Ring is the patented removable brew group. This device allows the machine to tamp, brew and dispense the coffee in one cycle. The brew group can be removed at the push of a button, for convenient rinsing and chemical-free cleaning. This brew group is exclusive proprietary Saeco technology and one of the unique advantages that has made Saeco the world leader in automatic espresso machines.
- Click Wheel Technology:** New click wheel technology is an exclusive innovation available for the Primea Ring. Thanks to its LCD display and large buttons, you can prepare coffee and your favorite drinks with minimal effort, in just a few minutes. Sliding your finger around the click wheel will give clear, instant details for each function.
- Touch2Cappuccino®:** Prepare two cappuccinos with just one touch. The built-in milk container allows you to make up to 4 cappuccinos. When the container is empty, the machine will stop brewing and the LCD display will alert you to fill the milk tank. The built-in Cappuccinatore froths perfect foam every single time.
- Nanotechnology:** This new Saeco technology guarantees that no milk will adhere to the internal parts of the machine. Nanotechnology, along with the automatic self-cleaning milk cycle, will ensure that the machine will stay in peak running condition.
- SBS Technology:** An absolutely revolutionary innovation. Saeco Brewing System (SBS) allows you to make an infinite variety of coffee drinks from just one machine at the twist of a dial. Choose from the strongest ristretto shot with a thick crema to a milder coffee with less crema. The SBS dial adjusts the amount of pressure in the brewing chamber, so you can control the strength and extraction for each cup brewed.
- Rapid Steam®:** Rapid Steam® technology reduces the normal waiting time between brewing coffee and steam output to just a few seconds. The Primea Ring has a separate heat exchange for steam, which allows it to provide fast and continuous steam pressure for frothing milk within seconds.
- Hot Water Tube:** The Primea Ring has a hot water tube to dispense hot water for Americanos, tea, hot chocolate and other drinks.
- Ceramic Disc Grinder:** The ceramic disc grinder is Saeco's most recent innovation, available in the Primea Ring. The ceramic grinder provides an even grind, allowing perfect dosing and blending, giving you more control over the density and body of your coffee. Because ceramic is inert it will not absorb the flavor of the coffee overtime, it is much more durable, and grinds considerably quieter.

- Programmable Brew Settings:** The Primea Ring is designed with 6 fully programmable beverages. With each drink, you can program the quantity of espresso and milk dispensed, temperature of the espresso, the amount of ground coffee used and pre-brewing function.
- Saeco Aroma System:** Taste the full aroma of coffee beans in every cup. To optimize the coffee drinking experience, a special programmed step injects a small amount of hot water into the freshly ground coffee to start a pre-brewing process. This is done just before the actual brew cycle commences in order to extract the best aromas and flavors from the grounds.
- Saeco OptiDose:** The OptiDose system allows the user to adjust the amount of coffee that is ground for each individual cup. It adjusts from 7 to 10.5 grams of ground beans per brewing cycle, which affects the strength of the extracted espresso.
- Touch Lift Technology:** The motorized drip tray can be easily raised or lowered allowing different cup sizes. Espresso cups or glasses can easily be accommodated. It is also removable for easy cleaning. No matter what mood you're in, we can fit the mug that goes with it.
- Pre-Ground Bypass Doser:** The pre-ground bypass doser allows you to use pre-ground decaffeinated or flavored coffee without emptying the beans in the grinder.
- Cup Warming Surface:** Stack several porcelain or ceramic cups on this large and convenient heating surface. The cup warming surface keeps your cups and espresso at an optimal temperature while enhancing the full flavors and aromas extracted from the bean.
- Aqua Prima Water Filter:** With the Aqua Prima filter the number of flavor-altering substances found in your water is greatly reduced. Impurities are filtered out of your water, leaving you to enjoy the improved flavor and full aroma of your coffee.
- Internal Dregdrawer:** The internal dregdrawer is where the Primea Ring deposits the coffee after the brewing process. Once full, LCD display will show that it needs to be emptied. Remove the dregdrawer, empty contents, rinse and replace the container into the machine. Once these steps are completed the machine is ready to brew again.
- Removable Drip Tray:** A single tray can be removed from the front of the machine containing the cup tray and drip pan. Made of durable ABS plastic, it cleans easily in soap and water. (Not dishwasher safe.)
- Sliding Wheel Base:** Small wheels have been placed on the base of the machine to simplify general maintenance and cleaning. The entire machine will rotate with a light push for easy accessibility of all the components.
